

FIXED INDEX ANNUITIES

It's not where the income starts – it's what happens next.

Our increasing income potential can help your income strategy stay strong.

Do you have a strategy to address the rising cost of living?

Because your retirement may last 25 to 30 years (or longer), it's important to have a source of guaranteed income for life. Fixed index annuities (FIAs) can provide this – plus protection from market downturns, accumulation potential, tax deferral, and a death benefit for beneficiaries.

But a level or fixed income may not be sufficient if expenses rise with inflation, especially over a long retirement. That's why it's important to also have opportunities for income increases.

Allianz Life Insurance Company of North America (Allianz) is a leader in providing annuities that offer the potential for increasing income. In fact, **we were the first to offer a withdrawal option that could increase every time the annuity earned an interest credit.**¹

Our history of giving income increases

of our clients who chose our increasing income option have **received an increase.**²

of our clients who are receiving income have **received an increase every year.**²

of our clients with multiple increase opportunities have **received an increase more than once.**³

Take a closer look to see how well our withdrawal options have worked. →

Analysis parameters: 72,487 fixed index annuity contracts were used for the analysis in this material, and represent contracts which elected an increasing income withdrawal option from 1/1/08 through 12/31/24, and would have been eligible to receive interest credits from 1/1/09 through 12/31/25. Increases displayed were taken from multiple products and income benefits/riders that were available at that time. The amount of the increase was determined by the interest credited by their chosen allocation option(s). These allocations include a wide variety of indexes and crediting methods. This data includes all allocation methods selected during that time, including the fixed allocation. Individual contracts may have seen varying amounts of income increases. Contracts that took excess withdrawals were excluded because they were not eligible for increases in all years.

Past income payment increases and interest credits are not a guarantee of future results.

¹Increasing income potential is provided through built-in or additional-cost riders. To be eligible for increasing income payments through withdrawals, you must choose a payout option offering increasing income and meet all contract conditions (which may include a deferral period or minimum age requirement), which will vary based on the terms of the specific product selected. There is no guarantee that your contract will receive an increase in any given year.

²The percentage of contracts that received an increase of any amount in a given year. 72,487 contracts were used for this analysis.

³The percentage of contracts with more than one opportunity to increase. 57,953 contracts were used for this analysis.

This material must be used with the Understanding fixed index annuities brochure (M-5217) or the applicable fixed index annuity consumer brochure.

Product and feature availability may vary by state and broker/dealer.

How our increasing income potential has fared – a historical perspective

Many of our current customers have seen the potential value of our increasing income potential and elected to begin taking a lifetime withdrawal benefit with the opportunity to increase. As you can see, many of these clients have seen increases credited to their income – and for some, increases come year after year.

These charts track the frequency of increases vs. the number of opportunities (income anniversaries) for each group of contracts and displays the number of income increases of all Allianz® income withdrawal options with increasing income potential.

Income benefits were elected from 1/1/08 (when the first contract eligible for income increases was elected) through 12/31/24.

For example, for contracts with three opportunities to increase, 49% have received an increase every year (i.e., three for three); 32% received increases in two years (i.e., two for three); 14% received increases in one year (one for three); and 5% received zero increases.

Analysis parameters on page 1 apply. The population of each income anniversary group differs. Due to rounding, some percentages may not equal 100%. ONE income anniversary: 14,534 contracts. TWO income anniversaries: 10,313 contracts. THREE income anniversaries: 8,579 contracts. FOUR income anniversaries: 7,398 contracts. FIVE income anniversaries: 5,976 contracts. SIX income anniversaries: 6,169 contracts. SEVEN income anniversaries: 5,077 contracts. EIGHT income anniversaries: 3,574 contracts. NINE income anniversaries: 2,572 contracts. TEN income anniversaries: 1,967 contracts. ELEVEN income anniversaries: 1,463 contracts. TWELVE income anniversaries: 1,158 contracts. THIRTEEN income anniversaries: 1,215 contracts. FOURTEEN income anniversaries: 1,045 contracts. FIFTEEN income anniversaries: 812 contracts. SIXTEEN income anniversaries: 443 contracts. SEVENTEEN income anniversaries: 192 contracts.

Helping address the effects of inflation

How well can you live on a fixed income in retirement? This is a critical question that you should answer if you're not including a strategy to address the effects of inflation, higher taxes, and medical expenses. Remember, a level income will **consistently purchase** less as the prices of goods and services increase year after year.

Allianz® FIAs and withdrawal options have helped clients protect retirement income from the effects of inflation.

We've used the actual credits and actual change in the Consumer Price Index (CPI-U) for each contract to compare income increases to the effect of inflation. We've grouped contracts based on the number of opportunities they've had to increase. Then within each group, we've listed the below-average, average, and above-average income increases and inflation.

We've shown how a hypothetical starting income of \$1,000 would have been impacted by income increases actually experienced by contract owners compared to inflation as measured by the CPI-U.

For example, the average increase in income for contracts with 17 opportunities to increase is 74.82%. This means that on average, a \$1,000 starting income would have grown to almost \$1,748, while the amount needed to maintain the same purchasing power would be \$1,458 on average.

Number of opportunities to increase	Percentage of contracts receiving at least one income increase	Range of total accumulated income increases		Hypothetical \$1,000 starting payment with total accumulated payment increases and inflation			
				Average income	Average inflation	Low to high income	Low to high inflation

Analysis parameters on page 1 apply. This chart displays the crediting and inflation history of the fixed index annuities which elected an increasing income withdrawal option from 1/1/08 through 12/31/24, and would have been eligible to receive interest credits from 1/1/09 through 12/31/25. The low credits and inflation were the 25th percentile cumulative interest credit and inflation for this period (75% of the credits/inflation were higher and 25% were lower). The average is the 50th percentile cumulative interest credit and inflation for this period (50% of the credits/inflation were higher and 50% were lower). The high is the 75th percentile cumulative interest credit and inflation for this period (25% of the credits/inflation were higher and 75% were lower).

NOTE: Past credits are not a guarantee of future results.

We are living longer:

Your retirement could potentially last 25 to 30 years, or even longer.

The cost of living could increase:

Everything you buy today could cost about twice as much in 25 years.

Three ways our withdrawal options can help your income strategy stay strong:

- **Straightforward design** allows your payment to increase every time interest is credited – and by the same percentage.
- **No decreases – ever.** With each increase, you're guaranteed to receive the higher payment for the rest of your life as long as you follow the terms of the contract.
- **More opportunities to increase income** since this payment option eliminates the need to overcome fees, index losses, previous income payments, or even a depleted contract value.

Having a lifetime income is important. But it's even better to have lifetime income that has the potential to increase. **TALK TO YOUR FINANCIAL PROFESSIONAL** about how you can keep your income as strong tomorrow as it is today.

Remember, diversification does not protect against loss or ensure that interest will be credited. Consumers are responsible for making their own decisions regarding allocation selections. For more information on indexes, see "Indexes used to determine interest" (M-5283).

Although an external index may affect interest credited, you cannot purchase, directly participate in, or receive dividend payments from any of them through the fixed index annuity contract.

Distributions may be subject to a withdrawal charge. Distributions are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal additional tax. Guarantees are backed solely by the financial strength and claims-paying ability of the issuing insurance company.
